

Enzo Markarian

Boston, MA · enzomarkarian28@gmail.com · github.com/zeno-blade-creator · zeno-blade-creator.github.io

Computer Science and Game Development student at Northeastern. Taught at an MIT summer program of 45 students, where I redesigned how they were quizzed and built the tools that ran it.

TEACHING & LEADERSHIP

MIT Beaver Works Summer Institute — Teaching Assistant, Serious Games with AI · 45 students, 9 instructors Jun – Aug 2026

- Replaced daily post-lecture quizzes with an activity where student groups draw a mind map before and after each lecture, so what they got wrong is visible while it can still be fixed.
- Wrote the guidance TAs used for stuck students: how to help them find their next step without AI doing the thinking for them.
- Had Claude Code build *Mind-Mapper*, a phone web app (Supabase) that tracks each group's participation and the key words from each lecture. [Claude Code](#)
- Moved the course from MIT's internal GitHub to public GitHub so students could reach it, put every year in one organization, and designed bots that set up each year's teams and check access nightly. [Claude Code](#)

MIT Beaver Works Summer Institute — Student Team Lead, Serious Games with AI Jul 2025

- Led 3 teammates making a zombie-apocalypse camp game that measures how much players trust AI helpers — which aren't always reliable — with tasks of different importance. Playtested with 6 players and presented the findings.
- Received the program's *AI Skill and Judgment* award, for building AI solutions and judging when to use them.

Brown Pre-College — Team Lead, Systems Thinking & Game Design Summer 2024

- Led a team of 4, in a cohort of about 40, to ship a game teaching opportunity cost — why companies underinvest in the environment when the benefit is shared and the cost is theirs. Rolled out to 20 players.

Los Altos High School Badminton — Spirit Lead 2023 – 2026

- Ran the team's family night for 130+ people plus trivia and Jeopardy socials through the season; led both the cheer squad and the team-bonding group.

PROJECTS

[Claude Code](#) = Claude wrote the code; I chose the goal, the order, and how to check it. [coded by me](#) = I wrote the code.

My Claude Code workflow — write-up on my site [Claude Code](#) Aug 2026 – now

- Set up a pipeline where Claude turns an idea into finished code: it questions my plan, writes a spec, splits the work into tasks — saying which must run in order and which can run in parallel — and builds each in a fresh session.
- Combined community skills (a multi-agent "council" debate, a strict code review) with two of my own: *ship* runs it all with one human check; *sharpen* turns what went wrong into fixes. A workflow change only stays if a with-vs-without test shows it matters — the first check deleted 4 of the 6 rules just added.

Mac version of a video game practice tool — C# [Claude Code](#) Aug 2026

- Split the port into 7 tasks, riskiest first. Opened a 21-file pull request to the original project; the maintainer has engaged over several rounds of review.
- Caught an AI reviewer rejecting working code over a function it wrongly said didn't exist — and was corrected myself when I claimed the project's API had no macOS option. It did. Both are why I check claims against the source now.

Getting a Windows-only game working on a Mac for free [Claude Code](#) Aug 2026

- Clicks did nothing and paid software didn't fully fix it. Pushed back when Claude said right-click worked — I'd played it; it didn't — which exposed an incomplete analysis. All mouse buttons now work; documented 6 bugs, 2 in the Whisky app itself.

Top-down 2D stealth game — C++, no game engine [coded by me](#) May – Aug 2025

- Wrote and understood the code myself with early AI autocomplete; learned CMake, compilers, game loops, and the limits of drawing in a terminal. Team lead with 2 teammates (92 of 107 commits); organized 10 playtesters.

Blockaform — Unity [Claude Code](#) Nov – Dec 2025

- 3D block-moving puzzle game; my first project learning Unity and connecting Claude to it.

EDUCATION, SKILLS & INTERESTS

Northeastern University — B.S. Computer Science and Game Development, Sep 2026 – May 2030 (expected) · **Foothill College Middle College** (college classes in 11th–12th grade, 2024–2026) — Intermediate C++, Calculus, Discrete Math, Physics with Calculus, Economics · Los Altos HS, GPA 4.50 / 3.97

Written myself: C++, Python, C#, Unity, Git/GitHub, some Java · **With Claude Code:** Supabase, Cloudflare Pages & Access, Netlify, GitHub Actions, REST APIs, MCP servers

Curious about: using AI to help students learn more deeply, beyond coding; and human + AI workflows that make both more productive · **Also:** 2nd-round finalist, Google case competition · National Hispanic Recognition Program
