Boston, MA · enzomarkarian28@gmail.com · github.com/zeno-blade-creator · zeno-blade-creator.github.io

EDUCATION

Northeastern University, Boston, MA — B.S. Computer Science and Game Development Sep 2026 – May 2030 (expected)
Foothill College, Middle College Program, Mountain View, CA — full-time college classes in 11th–12th grade 2024 – 2026
Coursework: Intermediate C++, Calculus, Discrete Math, Physics with Calculus, Economics
Los Altos High School, Los Altos, CA — GPA 4.50 weighted / 3.97 unweighted 2022 – 2026

EXPERIENCE

MIT Beaver Works Summer Institute — Teaching Assistant, Serious Games with AI [Claude Code](#) Jun – Aug 2026

- Redesigned daily post-lecture quizzes into an activity where student groups make mind maps before and after each lecture, and had Claude Code build *Mind-Mapper*, a web app (Supabase) tracking participation and each lecture's key words.
- Moved the course off MIT's internal GitHub onto public GitHub so students could reach it, bringing every year into one organization with separate head, instructor and student teams.
- Designed GitHub bots that set up each year's teams and repositories and check access every night, so instructors don't have to redo setup each summer.
- Expanded the student and instructor course websites into one central hub, and wrote a proposal for helping stuck students find their next step without AI doing the thinking for them.

MIT Beaver Works Summer Institute — Student Team Lead, Serious Games with AI Jul 2025

- Led 3 teammates making a zombie-apocalypse camp game that studies how much players trust AI helpers — which aren't always reliable — with tasks of different importance.
- Playtested with 6 players over repeated runs, tracking their progress and trust in the helpers, and presented the findings. Received the program's *AI Skill and Judgment* award.

PROJECTS

[Claude Code](#) = Claude wrote the code; I chose the goal, the order, and how to check it. [coded by me](#) = I wrote the code.

My Claude Code workflow [Claude Code](#) Aug 2026 – now

- Set up a pipeline where Claude turns an idea into finished code: it questions my plan, writes a spec, and splits the work into tasks — stating which must run in order and which can run in parallel — then builds each task in a fresh session.
- Combined community skills (a multi-agent "council" debate, a strict code-quality review) with two of my own: *ship* runs the whole pipeline with one human check, and *sharpen* turns what went wrong into fixes.
- Every workflow change must pass a with-vs-without test; the first check deleted 4 of the 6 instructions just added.

Mac version of a video game practice tool — C# [Claude Code](#) Aug 2026

- Split the port into 7 tasks, riskiest first; caught an AI reviewer wrongly rejecting working code. Submitted upstream (21 files); the maintainer has requested changes.

Getting a Windows-only game working on a Mac for free [Claude Code](#) Aug 2026

- Clicks did nothing and paid software didn't fully fix it. Pushed back when Claude said right-click worked (I'd tested it; it didn't), which exposed an incomplete analysis. All mouse buttons now work; documented 6 bugs, 2 in the Whisky app itself.

Top-down 2D stealth game — C++, no game engine [coded by me](#) May – Aug 2025

- Wrote and understood the code myself, with early AI autocomplete; learned CMake, compilers, game loops, and the limits of drawing in a terminal.
- Team lead with 2 teammates (92 of 107 commits); ran weekly check-ins and organized 10 playtesters.

Blockaform — Unity [Claude Code](#) Nov – Dec 2025

- 3D block-moving puzzle game; my first project learning Unity and connecting Claude to it.

SKILLS & INTERESTS

Written myself: C++, Python, C#, Unity, Git/GitHub, some Java · **With Claude Code:** Supabase, Cloudflare Pages & Access, Netlify, GitHub Actions, REST APIs, MCP servers

Curious about: using AI to help students learn more deeply, beyond coding; and human + AI workflows that make both more productive — including how to measure that past the short term

Activities: Team lead, Brown Pre-College game design · 2nd-round finalist, Google case competition · National Hispanic Recognition Program · Badminton, Los Altos HS ([spirit captain](#)) · Practice partner, Foothill College women's badminton
